

►► The element adding profile to the looks of your roof.

Rhepanol® fk –
standing seam profile

▶▶ A smart solution: Rhepanol® fk standing seam profile for a stunning look without any metal

Upgrading your flat roof

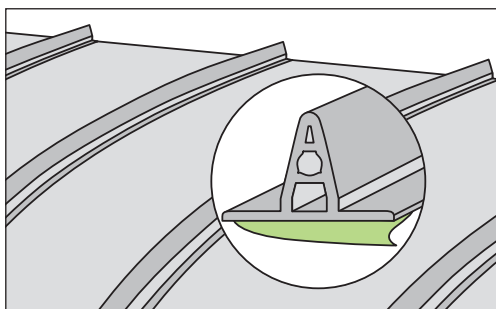

A traditional metal roof look can be achieved in a modern way: The standing seam profile used as a decorative element on Rhepanol fk provides a cost-efficient alternative to metal roofs, resulting in an architecturally attractive and technically functional design.

Accessories with top characteristics

- Flexible standing seam profile for perfect fitting to the geometry of the building
- Trimming and cutting of the standing seam profile with standard tools
- Simple application with self-sealing edge system without external power supply or adhesives
- Colour design by coating with Rhepanol roof paint copper and silver

Easy and quick installation

Adding profile to a roof is as easy as this: Clean the membrane surface at the working area, align the standing seam profile, tear off the protective release paper, fix the profile and press it on with the hand roller – done! Installation is always carried out from the ridge to the eaves; profiles are placed on the seam or at the membrane center.

Homogeneous material connection

A clear advantage over metal roofs

- Increased cost effectiveness through significantly lower costs for materials and installation
- Faster application
- Low rain noise
- Less contraction forces at high or low temperatures
- Application also possible on low sloped roofs

Forms of supply

Profile with self-sealing edge system

Profile height: 25 mm

Colour: grey

Length: 2 m

Rhepanol fk standing seam profile:

Item No.: 14 80 500

Rhepanol hand roller for standing seam profiles:

Item No.: 10 10 940
