

Who we are

SIG Design & Technology is a part of SIG Exteriors, a leading division of SIG plc, a FTSE 250 listed company and the UK's market leading specialist supplier to professionals in the building and construction industry.

What we do

SIG Design & Technology offer a complete and impartial design and supply service, built around our roofing products, which follows eight steps to help our clients create the Perfect Roof. Our expertise is just part of the service that we provide absolutely free to our clients. We design and supply flat roofs, green roofs, and zinc, copper and stainless steel roofing and cladding. To provide reassurance, we back our advice, products and solutions with both PI Insurance and full system guarantees.

How we work

The roof of any building is key to its performance, and not just to keep the rain out. Roofing also needs to provide suitable insulation, deal with acoustic issues, even capture carbon and generate electricity, and all within the regulations, on time and on budget, and with a long, predictable lifespan.

Take the risk out of roofing
